

■ AI Brain Tumor Detection Report

Date & Time: 08-06-2026 12:08:51

Tumor Type: NO TUMOR

Confidence Score: 53.93%

Model Confidence Level: Low Confidence

Risk Assessment: Low Confidence

MRI Analysis

Left: Original MRI **Right:** Grad-CAM Localization

AI Analysis

The AI model did not identify significant imaging features associated with a brain tumor. The MRI scan appears consistent with normal brain anatomy based on the learned patterns of the model. No suspicious tumor-related regions were strongly activated in the classification process. Despite this result, clinical interpretation by a qualified medical professional remains essential.

Conclusion

Based on the uploaded MRI scan, the AI model identified imaging patterns consistent with NO TUMOR. The prediction was generated with 53.93% confidence. The Grad-CAM visualization indicates that the highlighted region significantly contributed to the model's decision.
